

QuickNet™ Plug Pack Housings

QuickNet™ Plug Pack Housings facilitate quick and easy connection and removal of patch cords from a variety of switches, reducing the time and cost associated with installing and maintaining structured cabling links. Innovative design features of the plug pack allow multiple patch cords to be installed simultaneously with one hand for speed of deployment. Modular plugs are extended forward, eliminating interference with the front bezels of many switches. Individual cable links can be removed without disrupting service to the other network connections. QuickNet™ Plug Pack Housings accept all Panduit® UTP, and shielded Category 6A/6 copper patch cords.

Key Features

Benefits

Compatible with most RJ45 48-port, 1 RU switch blades and chassis including Cisco* Catalyst and Nexus series switches	Utilizes precision geometry for quick connection to the switch; standard, QPPN version compatible with Cisco* Catalyst 6K, 4K, and now 3750 and 3560 series switches; QPPNR recessed version compatible with Cisco* Nexus 7K series switches.
Integrated finger latch	Enables quick, one-handed installation and removal of QuickNet™ Plug Pack Assemblies from the switch
Variety of configurations	Available in six, eight, or twelve cable assemblies for optimal switch compatibility
Modular design	Snaps modular plugs directly into switches and utilizes an integral release tab to ensure easy on-site moves, adds, and changes
Low profile design	Allows plug pack assemblies to be installed side by side or stacked on top of each other providing maximum port density in high density installations
Marker ties (optional)	Enables easy identification in high density installations; provides additional level of security when combined with optional lock-in device
Removal tool (optional)	Allows individual patch cords to be removed without disrupting other network connections
Lock-in device (optional)	Prevents unauthorized removal of patch cords from the switch for an additional level of security

Application Information

Switch blades periodically need to be replaced or exchanged due to system upgrades or repair/replacement. Due to high port density, removing and re-connecting each individual patch cord is time consuming. Each QuickNet™ Plug Pack Housing accepts six, eight or twelve Panduit patch cords, allowing them to be installed, disconnected, and re-connected quicker than traditional methods, resulting in a 67% improvement of mean time to repair.

Optional lock-in device and marker ties provide an additional level of network security.

Optional labels allow each assembly and port to be identified.
