

PANDUIT®

Cable Cleats For Short Circuit Protection

PANDUIT CABLE CLEAT SOLUTIONS FOR SHORT CIRCUIT PROTECTION

Available in a variety of sizes, [Panduit's extensive line of cable cleat solutions](#) ensures cables remain contained in the event of a short circuit fault, minimizing disruption and damage to personnel and property. Panduit's Cable Cleats are uniquely engineered for ease of installation in a range of applications and harsh environments. With a variety of cable cleats, Panduit has the right product to fit your needs while providing on the job productivity, reliability and safety.

REDUCE PROJECT COSTS AND REDUCE INSTALLATION TIME

Simple and intuitive design
leads to increased productivity

Tested to IEC 61914:2015, the latest and
most globally recognized cable cleat
testing standard

Compatible with a variety of
ladder racks and cables

Collaborative and consultative
approach to cable cleat specification,
supported by a team

Industry-unique mounting
brackets and installation tool

Applications:
Oil and Gas, Petrochemical, Shipbuilding,
Rail, Utilities and Data Centers

IEC 61914:2015 is the latest, most comprehensive and globally accepted cable cleat testing standard. It provides requirements for:

- Temperature rating
- Adequate resistance to flame propagation
- Lateral load testing
- Axial load testing
- Impact resistance
- UV resistance
- Resistance to electromechanical forces
- Corrosion resistance

During a short circuit fault, maximum electromechanical stress between conductors occurs at or before 0.005 second

Typical circuit breakers and other protection devices trip and interrupt a fault between 0.06 to 0.1 second

Cable cleats perform their function within those first 0.005 second (i.e. at peak kA) before a circuit breaker trips and interrupts a fault

...the **NEC 392.20(C)** doesn't specify how to protect against excessive cable movement due short circuit, however IEC 61914:2015 provides testing methodology to ensure compliance to the NEC requirements.

Panduit Research & Development has created a state-of-the-art ANSYS award-winning program that simulates the material composition of our cable cleats and the electromechanical forces present in a short circuit fault, preparing our cable cleats for testing to IEC 61914:2015.

The cleats are then subjected to a live short circuit fault at a testing laboratory to validate compliance with this standard. The simulation program is a powerful tool that helps us select the most appropriate materials for our cleats, so they perform to their tested kA rating during a short circuit fault.

Selecting the right Cable Cleat has never been so easy

Prevent damages resulting from a short circuit fault by specifying and installing Panduit Cable Cleats

SELECT cable layout
INPUT peak short circuit current
INPUT cable diameter

App provides part recommendations and IEC 61914:2015 short circuit test compliant cleat spacing.

Cleat kAlculator™ is available for download in the Apple Store or Google Play, and Panduit.com/cablecleat.

STAINLESS STEEL TREFOIL CLEAT

The Stainless Steel Trefoil Cable Cleat offers protection against extreme environments and high short circuit current faults. It is made of 316L stainless steel, available in multiple sizes with cable range taking capability, and suitable for trefoil cable arrangements.

The cleat can be installed after running cable using a Panduit mounting bracket or before running cable by installing direct to the cable tray rung through a fixing hole using an M8 bolt.

Nylon insert
lock nut
for vibration
dampening

Tightening bolt can
be installed from
top or bottom

Removeable
spacer for cable
range taking

Mounting bracket
slot allows for
installation flexibility

STAINLESS STEEL BUCKLE STRAP CLEAT

The Stainless Steel Buckle Strap Cleat is an effective option for protecting against high short circuit fault current requirements in harsh environments. The strap is made of 316L stainless steel, has inherent cable range-taking, and is compatible with quad, trefoil, and multicore cables.

The cleat is installed after running the cable via a unique in the industry mounting bracket. It is tensioned and cut using a manually-operated, ratchet-style installation tool or a tension screw drive installation tool. The straps have rounded edges to protect from damaging the cable and are often used in combination with a cushion sleeve inserted between the strap and cable for added protection.

Buckle design provides low finished profile

Smooth surfaces and rounded edges reduce risk of cable insulation damage

Compatible with a variety of cable trays and cables

STAINLESS STEEL LOCKING STRAP CLEAT

The Stainless Steel Locking Strap Cleat is an effective option for protecting against lower to medium short circuit fault current requirements in harsh environments. The strap is made of 316L stainless steel, has inherent cable range-taking, and is compatible with quad, trefoil, and multicore cables.

The cleat is installed after running the cable via a unique in the industry mounting bracket. It is tensioned and cut using a battery-operated, electromechanical or manually-operated, ratchet-style installation tool. The straps have rounded edges to protect from damaging the cable and are often used in combination with a cushion sleeve inserted between the strap and cable for added protection.

Cable tie cut off eliminates exposed sharp edges

Self-locking head for high-retained tension

Smooth surfaces and rounded edges reduce risk of cable insulation damage

THE COMPLETE PANDUIT **CABLE CLEAT TOOLS**

The manually-operated **BT2HTI** and **BT75SDT** tools are used to install Panduit's Buckle Strap Cleats.

The **BT2HTI** is a ratchet-style installation tool, allowing for high tension with minimal effort.

The **BT75SDT** tensions the strap using a screw drive mechanism, providing high tension while reducing operator fatigue.

Both tools use a lever to cut the strap so there is an appropriate length remaining to fold over and secure with the buckle tab. A side entry slot allows for easy strap insertion, streamlining installation. The BT2HTI is more suitable for higher volume installations, and the BT75SDT for lower volume.

PANDUIT MOUNTING BRACKETS AND CUSHION SLEEVE

Mounting Brackets for Easy Installation and Labor Savings

Install cable cleats after the cable is pulled with Panduit mounting brackets that affix to the cable tray and cleat after the cable is run in the tray.

CBH Series Brackets are compatible with the CCSSTR Series Stainless Steel Trefoil Cleats and CCALTR Series Aluminum Trefoil Cleats.

UC Series Brackets work in concert with Panduit's unique MLT Series Locking Strap Cleats and MS75 Series Buckle Strap Cleats.

For use with

*Available in Stainless Steel 316L and Galvanized Steel.

ALUMINUM TREFOIL CLEAT

The Aluminum Trefoil Cable Cleat is ideal for medium-high short circuit faults in less corrosive environments. It is available in multiple sizes with cable range-taking capability and is suitable for trefoil cable arrangements.

The cleat can be installed after running cable via a unique in the industry mounting bracket or before running cable through it by installing direct to the cable tray rung via a fixing hole and M8 bolt. Insulating spacers and washers are available to protect against galvanic corrosion between dissimilar cable tray rung and cable cleat materials.

Nylon insert lock nut for vibration dampening

Rounded edges for cable protection

Installation before or after cable is run via fixing bolt or mounting bracket

Hinged for cable range-taking

Short Circuit Testing Summary¹

Flat Formation 105mm Cable Spacing	Flat Formation 105mm Cable Spacing
One Short Circuit Event (Clause 6.4.4) 600mm spacing	Two Short Circuit Events (Clause 6.4.5) 600mm spacing
69.5 kA	69.5 kA
1055 lbs force (4.69 kN)	1055 lbs force (4.69 kN)

¹Test compliance to IEC 61914:2015 utilizing KEMA facility; Independent, ISO 17025 accredited testing, inspection, and certification services (IEEE, IEC, UL, and ANSI) for electric power equipment.

PANDUIT SOLUTIONS FOR ELECTRICAL AND NETWORKING INSTALLATIONS

From Breaking Ground to Routine Maintenance and Repair, Panduit Products Impact Your Entire Project Lifecycle

Partner with a company committed to meeting the daily challenges you face. Panduit offers a full solution of over 30,000 readily available parts – from cable ties to power connectors, terminals to identification – Panduit products are engineered for all aspects of designing, installing and maintaining infrastructures within heavy-duty industrial environments.

Productivity Reduce costs and meet deadlines with products and tools engineered to improve efficiency

Reliability Ensure performance and design consistency of products that are vital to the success of the job

Safety Protect personnel, equipment and infrastructure

Global Capabilities

Global Expertise and Support

Global distribution, manufacturing, sales and technical support teams make Panduit solutions readily accessible, allowing the right products to be delivered when and where they are needed.

Worldwide Certifications

Panduit solutions hold a variety of the most common heavy industry certifications and approvals worldwide.
